The internal project EJP SOIL ARTEMIS aims to develop indicators for field assessment and modelling of ecosystem services, providing the basis for decision-makers to promote climate-smart sustainable farming practices in Europe.

At the kick-off meeting all project partners will meet to share their knowledge and experiences on how agroecological practices can contribute to climate change mitigation and adaptation.

The project ARTEMIS is developed in the framework of the European Joint Program for SOIL “Towards climate-smart sustainable management of agricultural soils” (EJP SOIL) funded by the European Union Horizon 2020 research and innovation programme (Grant Agreement N° 862695).
